Bioassays of

Falkenburg Road Advanced Wastewater Treatment Plant

Tampa, Hillsborough County, Florida NPDES #FL0040614

> Biology Section Bureau of Laboratories September 2002

Introduction

Falkenburg Road AWWTP, 102 North Falkenburg Road, Tampa, Hillsborough County, Florida, NPDES #FL0040614, tests performed on 2 to 4 April 2002.

This wastewater treatment plant has a design flow of 6.0 MGD and an annual average flow of 4.22 MGD (January 2001-December 2001). Wastewater treatment includes influent screens, grit removal, 4 anoxic tanks, 4 aeration tanks, 4 final settling tanks, 5 dual-media deep-bed filters, 2 chlorine contact chambers, and 2 dechlorination/reaeration tanks. Effluent is chlorinated for disinfection and then dechlorinated with sulfur dioxide gas prior to being discharged into the Class III marine waters of the Palm River (facility information provided by Andrea Grainger, FDEP, Tampa).

The toxicity tests discussed in this report were performed in accordance with methods described by Weber, 1993, *Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters to Freshwater and Marine Organisms*, 4th Edition, EPA/600/4-90/027F.

Results and Discussion

The FDEP Biology Section performed two 48-hour static acute screening toxicity bioassays on a sample of effluent collected from this facility. The freshwater species used in testing were the water flea, *Ceriodaphnia dubia*, and the bannerfin shiner, *Cyprinella leedsi* (Table 1).

Toxicity was not evident in the test organisms used in the bioassays. Neither total residual chlorine nor total ammonia was detected in the bioassay sample in the laboratory. Additional samples of effluent were collected from this facility and analyzed for herbicides, nutrients, metals, organic compounds, and pesticides. Several metals, nutrients and one pesticide were detected (Table 2).

Conclusion

The sample of effluent collected from this facility on April 1, 2002, showed no acute toxicity to either test species within 48 hours.

Table 1. Data recorded during the 48-hour acute screening bioassays of a sample of effluent from Falkenburg AWWTP, 102 North Falkenburg Road, Tampa, Hillsborough County, Florida, NPDES# FL0040614, performed from 2 to 4 April 2002.
